Dev Environments

CNTbands

Structure: Carbon Nanotube

Simulation Method: Pz orbital

Chirality (n,m)

n: 7

m: 7

Model parameters

Tight Binding Energy: 3eV

Carbon-carbon spacing: 1.42A

Length in 3-D view: 40

Simulate new input parameters

CNTbands

Learn about Carbon Nanostructure physics as you explore the devices in this simulator.

Enter values on the left, then push the Simulate button. Simulation results will appear here.

For nanotubes, try $n=7$, $m=7$ (7,7) to see an "armchair" metallic nanotube. Then try a (12,0) "zigzag" nanotube, which is a different kind of metallic nanotube. Next, try a (13,0) zigzag nanotube. The energy gap in the band diagram tells you that this last one is semiconducting.

Then select the nanoribbon device, type A, and try (3,3) for a "zigzag-edge" nanoribbon. Next try a (4,0) "armchair-edge", semiconducting nanoribbon.

This application is powered by: Octave and Fortran 77. Last updated April 2010.

Researcher
NanoStructures

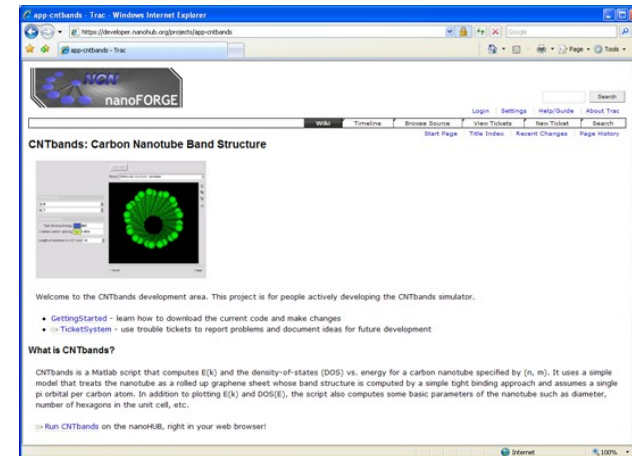

2002 – Idea for a Tool

Tool Registered

<https://yourhub.org/tools>

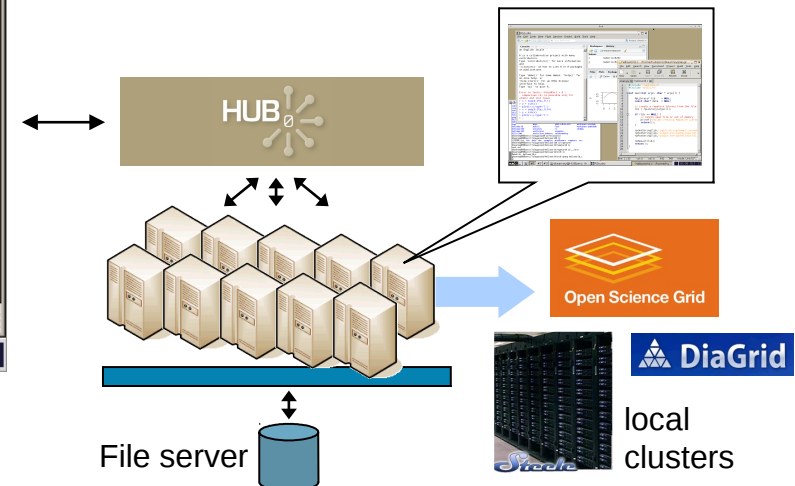

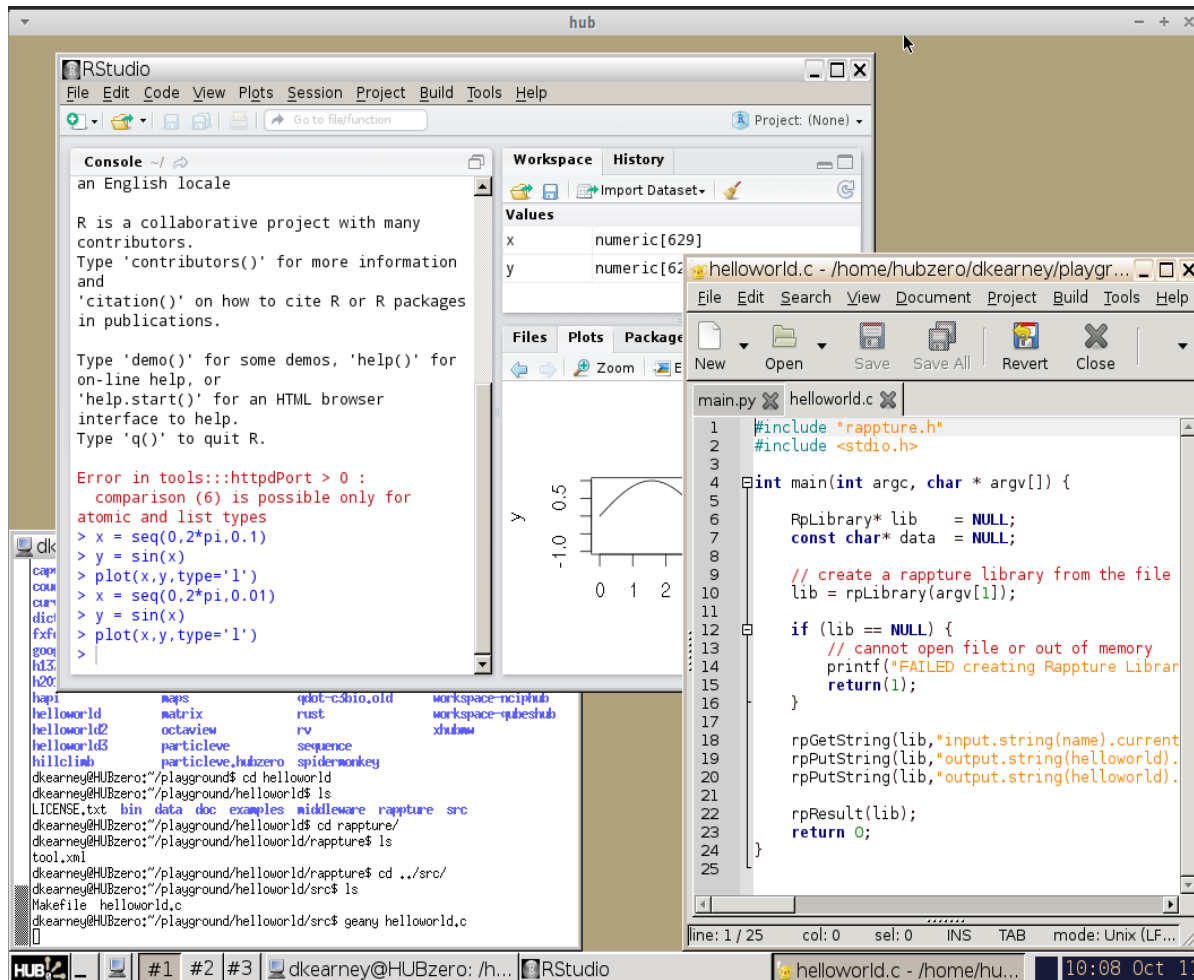

Provides:

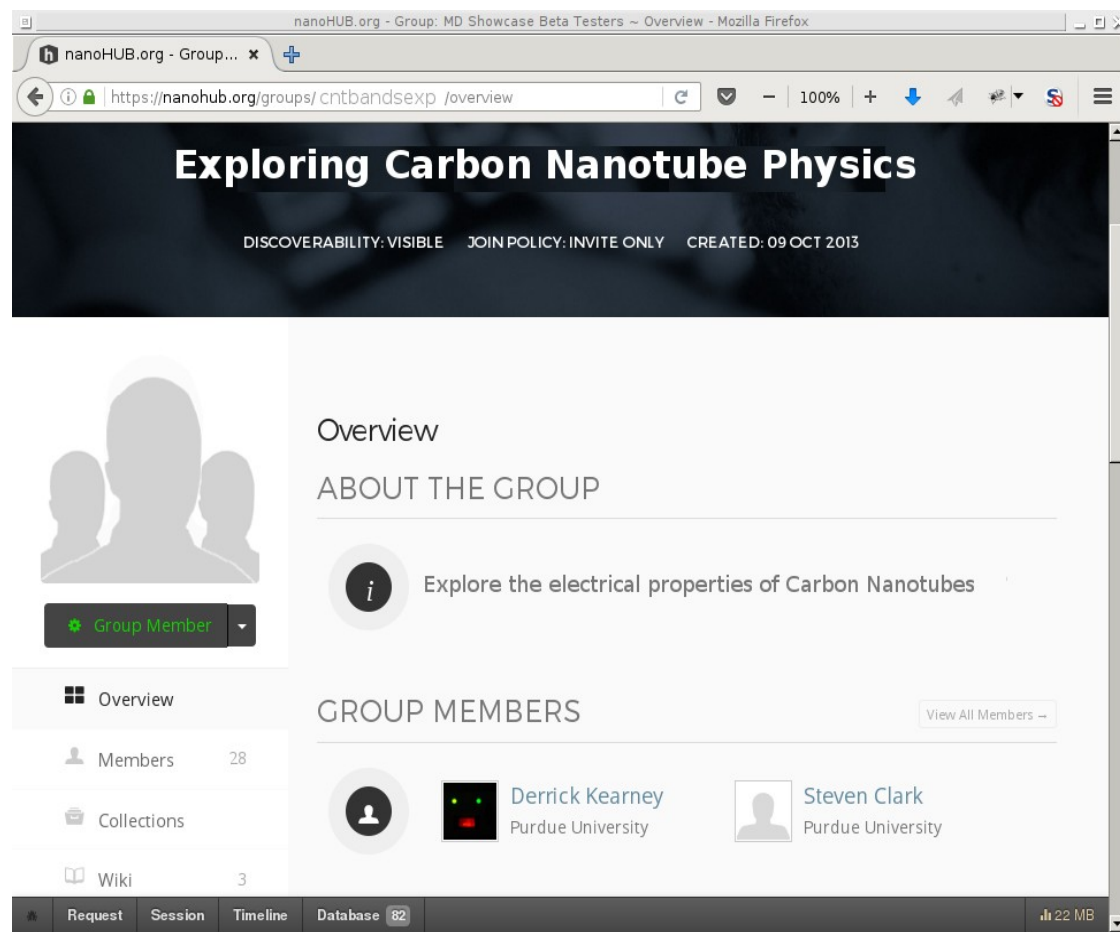

- Source code repository
- Wiki for project documentaton
- Placeholder for publishing tool
- Access to HUB Workspace

What is a Workspace?

- Full-featured Desktop
- Runs in the Cloud
- For Developers & Researchers
- Accessible from any web browser
- Still running after you close browser
- File storage provided by the HUB

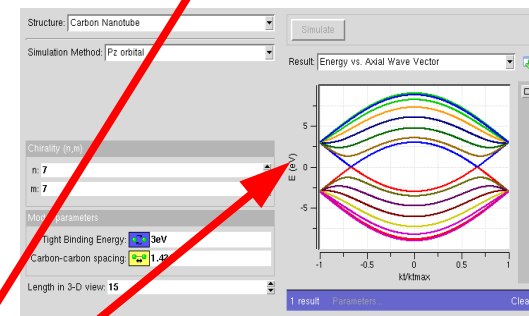

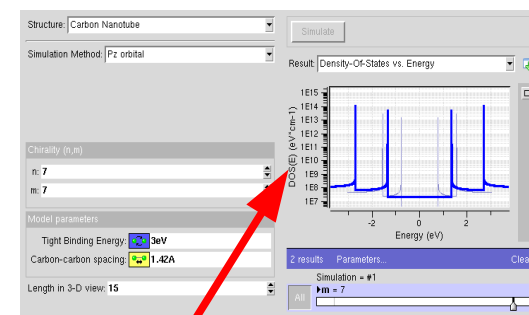

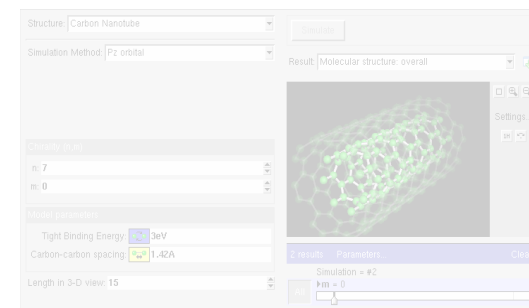

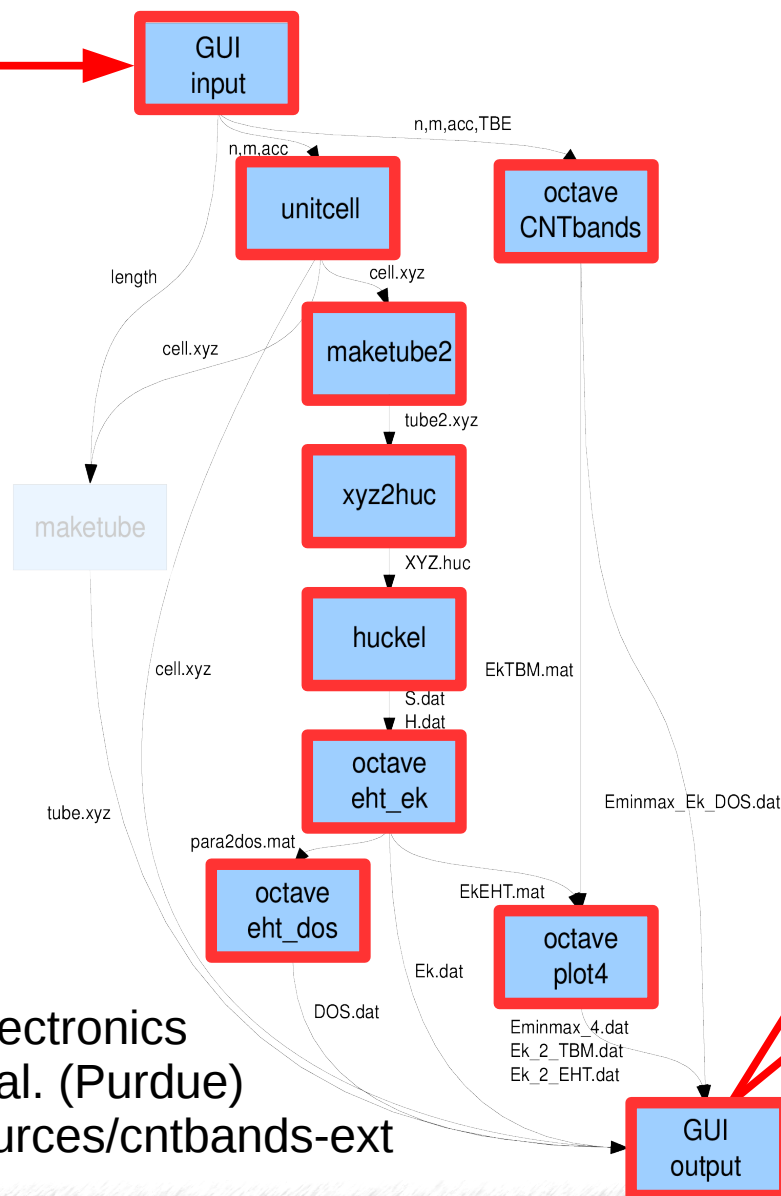

Collaborate within a Group

- Build a community around your research
- Share links, papers, and data
- Forums encourage discussion
- Create how-tos with wiki pages
- Keep everyone informed with Announcements

Installing Applications

What's next?

Your latest code is installed and ready on nanoHUB. Please test your tool by clicking the button below to ensure that everything is working properly, as well as that the page describing your tool is created with correct information:

➔ Test your application:

Launch tool ➔

➔ Review the page describing your tool

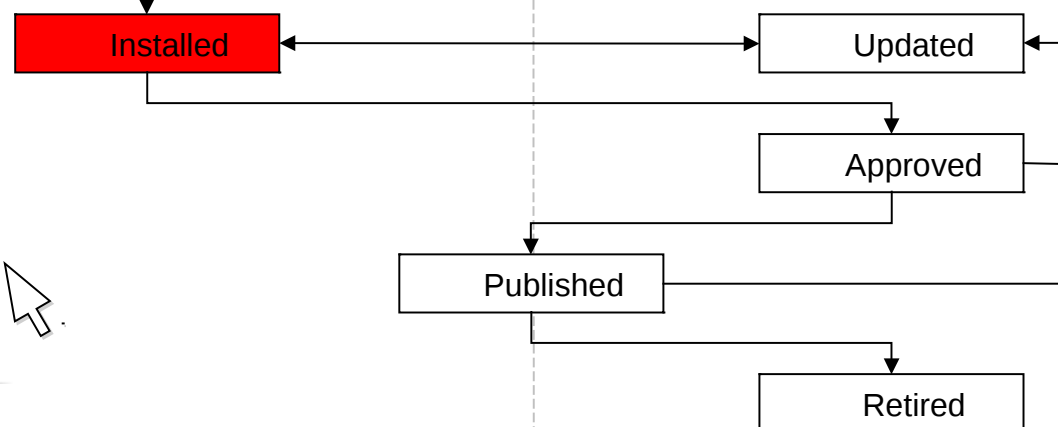

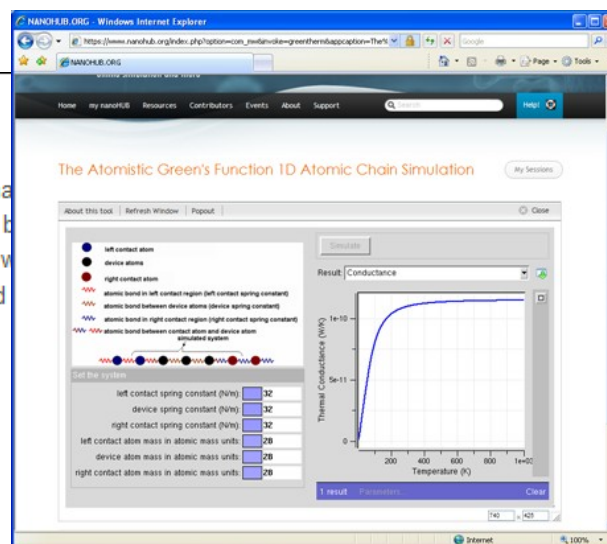

We are waiting for You

Once you tested your tool and verified that it is working properly, click here to let us know:

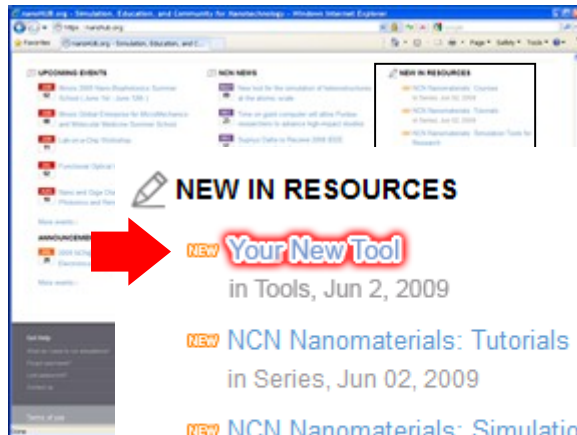

➔ My tool is working properly. I approve it.

Need to make changes? Once you've checked in your latest fixes, click here to let us know:

➔ I've fixed my code. Please install the latest updates.

Windows tools and HUBzero

- Newer feature to complement our Linux Tool functionality
- Explore cloud based resources
- Initial implementation utilizes AWS Appstream, a highly optimized video intensive Windows deployment platform
- Overall effort focuses more on end user application deployment and collaboration than tool development.
- Use of commercial tools
- Strict licensing requirements
- Heavy single workstation requirements

“Macro” level workflow

- Pegasus is one of many granular scientific workflow management tools
 - Highly automated workflows
 - Specializes in task partition and scheduling in HPC environments
- We're also working on higher level workflow – Business Rules Engine
 - Focuses more on higher level tasks
 - Higher degree of user interaction
 - Use a mix of workflows at several different levels
 - Use of heterogeneous operating systems
